

Construction Management Engineering Technology

What You'll Learn

Students will receive a well-rounded education in both the theory and application of quality construction principles. Course work includes the basic methods, materials, techniques, and developments involved in the construction industry. This program offers students a unique combination of management, design, and hands-on experience. Students analyze the interrelationships among the various organizations within the industry. Skill development includes blueprint reading, estimating, residential and commercial project management. Students will also learn about the interaction of materials and methods of installation.

What You'll Need

Students should have an aptitude for math and a desire to learn how building systems are assembled and coordinated to form a finished project. Students should also have an interest in how buildings and infrastructures, such as highways and bridges, are designed and constructed.

What You Can Expect to Earn

Construction Project Manager	\$57,000 - \$66,500
Construction Materials Sales	\$49,000 - \$60,000
Estimators	\$43,000 - \$55,000
Construction Supervisors	\$45,000 - \$53,000
Building Inspectors	\$36,000 - \$46,500
Surveyors	\$35,000 - \$44,000
Contractors	Wide Variance

Where Our Graduates Have Found Employment

- Ciminelli Construction Co.
- Cannon Architects
- National Fuel Gas
- Department of Transportation
- Baer and Associates
- New York State Thruway Authority

What Can You Tell Me About The Workplace Environment?

The environment for graduates can vary depending on job placement. Graduates may work for a company or municipality and estimate, plan, or inspect a multitude of projects. Field technicians may spend considerable time surveying, supervising, or managing new construction projects.
